LEARNING UNIT 3

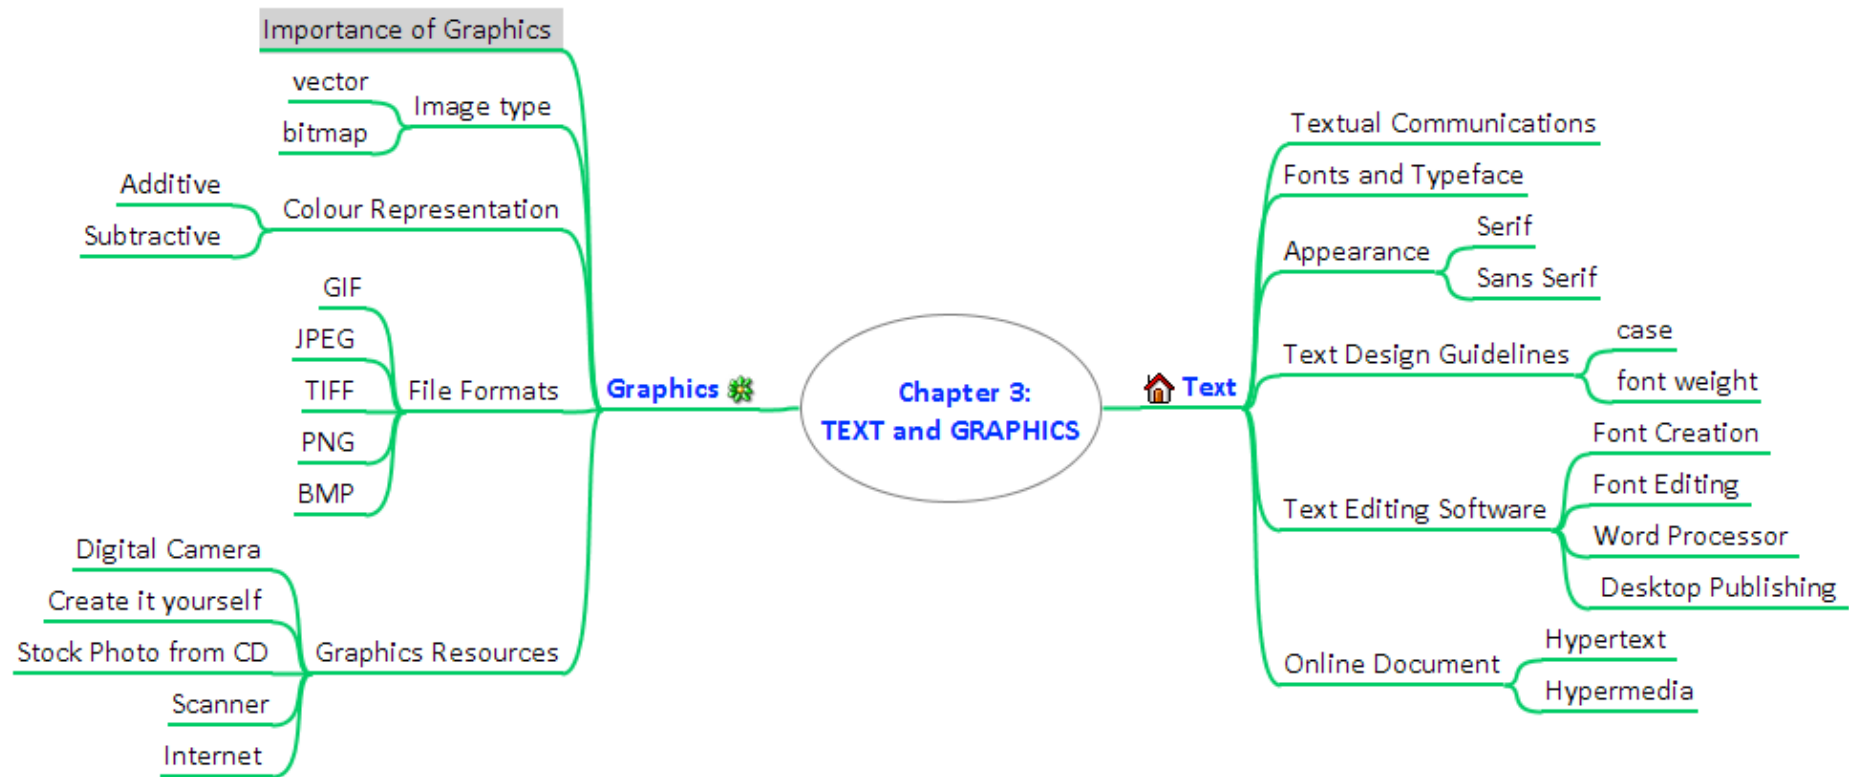

MULTIMEDIA : TEXT AND GRAPHICS

LEARNING OUTCOMES

- Describe how text can be used in multimedia.
- Discuss about hypermedia and hypertext.
- Compare and contrast bitmap and vector graphic.
- Examine how to find graphics and image editing software.

<i>Los Angeles 24 pt</i>	<i>Geneva italic</i>
<i>Los Angeles 12 pt</i>	Chicago (outline)

Original Mac Fonts

Serif vs Sans Serif?

Serifs

No Serifs

AV

serif Fonts

Bodoni

Bodoni is extremely distinctive due to its wideness in the meaty areas of its letters. It can sometimes become overbearing if it is used in long articles. This font is popular for artsy and contemporary publications.

Georgia

Georgia has a fuller form than most serif fonts and is good for use in titles. Due to its widespread installation on most computers, it is the best serif font for web text other than Times New Roman.

ITC New Baskerville

Like Adobe Garamond, ITC New Baskerville is a favorite of publishers today. It is a little larger than the average serif font, and packs tremendous style.

Palatino

Palatino is a good font to use in brochures, flyers, and other types of print materials. It shows up in the body text of many current magazines.

Times New Roman

By all means, this is the world's most popular typeface. It is the default font in a great deal of programs, and you can expect that every computer will have it. You can't go wrong using it, but if you want to impress someone, I would suggest using a different font.

Sans-serif Fonts

Helvetica

Helvetica is very similar to Arial, and in my opinion, slightly better. It is a nice font to use for titles or in the body of web pages. It comes installed on all Macs, but not with Windows, so it should always be used in conjunction with Arial when setting web page styles.

Myriad

Myriad has a softer and more welcoming appearance than most sans-serif fonts. It is one of my favorite fonts to use for making title images.

Tahoma

Tahoma is installed on most every computer in use today and thus makes a good choice for use in the body text of web pages.

Univers

Univers is a clean-cut font that is vastly popular by the art community. It is just different enough from other sans-serif fonts for people to be intrigued by it.

Verdana

Today Verdana is probably the most popular font used for body text on web pages. It looks great on screen and in small sizes. We use it on Spoono.

When choosing fonts the weight of the font is also a major factor in the decision.

Adobe Caslon Pro Roman

When choosing fonts the weight of the font is also a major factor in the decision.

Adobe Caslon Pro Bold

Font's weight can affect legibility.

A VISUAL GUIDE **TO BETTER HEAD-** **LINES**

Here is an example of a confusing headline and body relationship. Where everything is too much of the same. I have only started "e" scrapbooking recently, after getting tired of looking through photos that were still in the studio envelopes. I

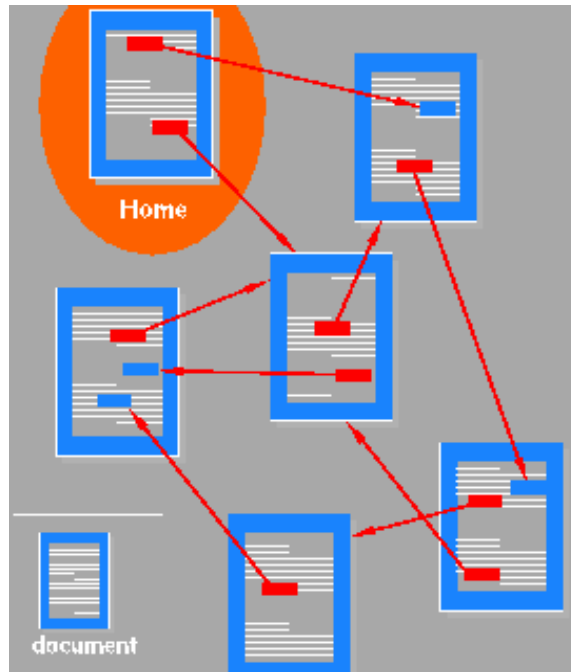

A visual guide to better headlines

Here is an example of a confusing headline and body relationship. Where everything is too much of the same. I have only started "e" scrapbooking recently, after getting tired of looking through photos that were still in the studio envelopes. I never liked traditional photo albums and that's why I started scanning the one great photo to create something that everyone would enjoy

Summary

Typefaces are the design of the font.

JPEG is for photo. GIF is for symbol art.

Vector graphics are used for geometrical shapes.

Bitmap graphics are composed of small pixels.
