ACKNOWLEDGEMENT

We would like to take this chance to thank God for all the blessings we received and for the guidance all through his journey. We hope that all the sleepless nights and misunderstandings within our group will contribute to our success in the future. Also, we sincerely thank Sir Jonathan Licera for their valuable expertise and guidance throughout this project. Their contributions have been essential to its success and have greatly enhanced our results. We deeply appreciate their dedication and professionalism. For Sir Rodeline A. De Juan, whose valuable guidance has been helpful in putting together this project and make it successful, his suggestions and his instructions have served as the major catalyst towards the completion of this project. He provided us the right guidance and advice at the crucial stage of our college life and showing us the right way. Sir Jhon Ryan Magno, thank you for your patience and for providing us with the opportunity and resources to undertake this project.

At this point, we would like to express our sincere gratitude to our families and friends for their constant understanding, support, and encouragement during this journey. The trust you have in us gave us a lot of strength.

PASSI CITY COLLEGE
City of Passi, Iloilo

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

Without the combined efforts of everyone listed above, this project would not have been achievable. Thank you for being an essential part of our journey.

PASSI CITY COLLEGE
City of Passi, Iloilo

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

DEDICATION

As we mark the completion of this research, we are full of gratitude and humility to know that it would not have been achieved without the incredible support and guidance that we received.

First and foremost, we dedicate this work to God, who has been so benevolent in giving us all wisdom and grace in every step. His blessings have been with us in giving strength for continuance, the lucidity to overcome difficulties, and the courage to proceed forward even when the road seemed uncertain.

To our mentors and advisors, we extend our deepest gratitude. Your guidance, encouragement, and priceless insight have been the cornerstones of this work. In addition to teaching me the nitty-gritty of research, you have also instilled in me the virtues of dedication, resilience, and intellectual curiosity.

To our colleagues and team members for their commitment, dedication, and sharing of this project. As we brainstormed ideas into actions, faced obstacles with determined efforts, and brought to life this research.

PASSI CITY COLLEGE
City of Passi, Iloilo

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

To our parents, this journey would not have been possible without your unwavering financial support, encouragement, and belief in our dreams. You made sacrifices so that we could pursue this path, and your love and commitment have been a constant source of inspiration. This work is a testament to the values and opportunities you have given us.

In celebration of this achievement, we acknowledge that it is not ours alone but the collective faith, teamwork, and the steady support we enjoy from our loved ones.

Thanks.

MADISON SCHOLASTIC ACADEMY STUDENT RECORD MANAGEMENT SYSTEM

Panes, June Shane P., Papelera, Louie John P., Semblante,
Gemcil P., Rebana, Joylyn D., Tanique, Yuki Mae P.,
(2025), Unpublished.

ABSTRACT

The creation and application of a MSA Student Record Management System designed especially for Madison Scholastic Academy is examined in this project. This system's primary purpose is to enhance student record management accessibility, accuracy, and efficiency by addressing shortcomings in the academy's present manual operations.

To maintain data integrity and confidentiality, the SRMS is developed with a user-friendly interface, strong database administration, and secure access restrictions in mind. Academic performance tracking, attendance monitoring, and extensive reporting capabilities are among the key functions. These tools are intended to ease administrative work and give immediate insights on student development.

To avoid data redundancy and assure record consistency, the system uses a relational database. The development process followed Agile methodology principles, which included iterative design, development, and testing phases to include

PASSI CITY COLLEGE
City of Passi, Iloilo

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

feedback from the staff and ensure the system suited their specific requirements. Extensive testing validated the system's performance, dependability, and security, confirming that it is appropriate for academic deployment.

Finally, Madison Scholastic Academy's Student Record Management System outperforms traditional record-keeping approaches. By reducing administrative processes and improving data accessibility, the SRMS is positioned to contribute to more effective management and better educational outcomes at this school.

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

CHAPTER I

INTRODUCTION

Project Context

Background of the Study

Madison Scholastic Academy, like any other educational institution, recognizes the importance of student record management. Effective management of student information is essential for administrative and academic progress monitoring. Keeping track of final grades and creating report cards—which are the main ways that parents and children are informed about academic performance—are two of this system's most important components.

The student record management system at Madison Scholastic Academy is essential to the recording and processing of student grades. The accuracy of student data entry and storage, including computing of final grades, is guaranteed by the system. In addition to maintaining records, the system facilitates the creation of final report cards, which offer a thorough summary of every student's performance over the academic year.

A key aspect of this system is how it ranks students in each section. This feature helps the school evaluate how students perform compared with their peers and pushes them to

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

2

compete in a good way and get better. The system calculates these rankings by looking at all the parts of a student's schoolwork that count towards their final grades. Teachers and staff depend on how well the system makes this ranking process smooth, quick, and correct.

Putting such a system into action at Madison Scholastic Academy aims to boost how well the administration works, cut down on errors people make when handling records, and make the academic evaluation process run. It makes academic reporting more open and fairer, which is crucial in keeping the trust of students, parents, and teachers alike. Ultimately, the Student Record Management System at Madison Scholastic Academy has the goal to make computing final grades and ranking better, in the end helping the school to give out clear, on-time, and correct academic reports.

Statement of the Problem

The Madison Scholastic Academy Student Record Management System is key to keeping tabs on and handling students' school performance when it comes to computing final grades, generating report cards, and student rankings every section. But the system they have now has a few problems that affect the accuracy of management of academic data. These issues

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

3

often lead to hold-ups, errors, and differences in how report cards and rankings are made, which can have an impact on both students and teachers.

This study aims to pinpoint the specific challenges within the existing student record management system and suggest enhancements to tackle these problems. It particularly examines how the system manages final grades and its capacity to produce precise report cards and rankings for each section.

Research Questions:

1. How well does the current student record management system at Madison Scholastic Academy accurately record and process students' final grades?
2. What enhancements can be implemented to improve the system's capability to generate timely and accurate report cards and rankings for every section?

Project Description

The Madison Scholastic Academy Student Record Management System is a comprehensive tool designed to enhance the management of pupils' academic records. It emphasizes crucial aspects of pupil information management, including grade calculations, report card generation, and pupil ranking. By

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

4

automating these processes, the system ensures greater accuracy, efficiency, and transparency in managing academic records. This initiative marks a significant step towards modernizing administrative functions and meeting the demands of a fast-changing educational environment. The Madison Scholastic Academy's student record management system offers a centralized platform for keeping accurate and current pupil information, including personal details, academic records, and rankings from nursery through Grade 12. Teachers can enter grades for their subjects, and the system processes these entries to calculate final grades and rankings for each pupil in their section. Additionally, the system produces detailed and timely report cards, providing pupils and teachers with a dependable overview of academic progress. These features help streamline workflows, minimize the chances of human error, and promote fairness and consistency in academic evaluations. The project places a strong emphasis on data security and privacy, incorporating effective measures to safeguard sensitive pupils' information. Although the system is mainly centered on academic data, it intentionally leaves out non-academic records like attendance and behavior logs, keeping the focus clear and manageable. Despite some limitations, such as predetermined report card formats and

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

5

rankings specific to sections, the system represents a notable step forward in enhancing operational efficiency and maintaining data integrity at Madison Scholastic Academy. The Madison Scholastic Academy student record management system showcases the academy's dedication to using technology to enhance educational results. By streamlining administrative tasks, the system enables teachers to concentrate on their primary teaching duties while allowing pupil to receive accurate academic reports in a timely manner. Additionally, this system lays the groundwork for future advancements and serves as a useful resource for researchers and other institutions looking into similar innovations in student record management.

Objectives of the Study

The Madison Scholastic Academy Student Record Management System aims to achieve objectives and results about the establishment and application of the system in the educational setting.

General Objective

The primary aim of this study is to evaluate and enhance the functionality of the Student Record Management System at Madison Scholastic Academy. Student record management aims to

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

6

maintain accurate and up-to-date information of students, including personal details like name of student, LRN, Birthday, name of father and mother and also the contact number. And, this system plays a crucial role in managing students' final grades, generating report cards, and ranking students within each section from nursery to grade 12. The focus of the study is to ensure the system operates accurately and efficiently, allowing for the correct processing of grades and timely generation of report cards. By examining the current system, we aim to identify opportunities for improvement. This includes minimizing errors, accelerating the process, and guaranteeing that report cards and student rankings are accurate for every section. Enhancing the system will provide teachers, students, and parents with dependable academic information when they need it.

Specific objectives

1. Provide an easy access for information of student.
2. Improve faster processing of the report card and student rank.
3. Provide timely and accurate student grades.

Significance of the Study

The Madison Scholastic Academy's Student Record Management System (MSASR) is beneficial for the school and their stakeholders.

First, Madison Scholastic Academy has demonstrated its dedication to embracing technology innovations and updating administrative procedures by using the SRMS. The study provides important insights into how well technology may be used to speed up personal details, academic record-keeping, and student payment management by analyzing the effects of the SRMS.

Madison Scholastic Academy. Madison Scholastic Academy can greatly benefit from the Student Record Management System (SRMS), which offers an efficient and secure way to handle student records. The SRMS enhances the accuracy and timeliness of record-keeping, lightens the administrative workload, and boosts data security and privacy. This improvement will enable Madison Scholastic Academy to better support its students, faculty, and staff, ultimately enhancing the overall effectiveness of its academic programs.

Students. The SRMS can provide significant benefits to students. The enhanced system guarantees that final grades, report cards, and rankings are precise and provided promptly,

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

8

offering students a clear and trustworthy view of their academic performance and progress.

Teachers. The SRMS can provide significant benefits to schools. With an improved record management system, teachers' task will lessen and grade computation is more accurate. This system will enable them to manage their time effectively, allowing them to concentrate more on teaching and assisting students.

Future Researchers. The SRMS can provide a valuable resource for other researchers in the academic community. Future researchers may find the findings and improvements proposed in this study useful as a reference for schools or researchers aiming to implement or enhance their own student record management systems.

Scope and Limitation of the Study

This project will focus on assessing and upgrading the management of student personal and academic records, specifically in areas such as grade computation, report card generation, and student rankings. Teachers will input final grades for each subject, which the system will process and link to each student's profile. The system will also generate

PASSI CITY COLLEGE
City of Passi, Iloilo

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

9

comprehensive reports for administrators and rankings for students within their respective sections.

While the SRMS effectively manages academic records, it has limitations. It does not handle non-academic information, such as attendance or behavioral records. The formats for report cards are fixed, limiting customization options. Additionally, rankings are confined to individual classes and do not allow for cross-class or school-wide comparisons. The system is exclusively for Madison Scholastic Academy, making it unavailable for other institutions. Despite these limitations, the system excels at maintaining academic records within the school.

PASSI CITY COLLEGE
City of Passi, Iloilo

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

CHAPTER II

REVIEW OF RELATED LITERATURE AND STUDIES

This chapter mainly outlines the many studies and other literature from local and international sources researchers, who significantly impacted the factors that were examined in the study. It centers on multiple elements that will support this project's progress. The project is focused on the viability of setting up a system for managing student records. The project's literature was sourced from books, journals, articles, digital resources like slide slides and PDFs, and further completed thesis and dissertations, international and local works of literature that are seen to be beneficial in the expansion of knowledge about the project.

Otobo and Alegbeleye (2021), posited records as barometers for measuring the performance of an organization which means that without records, no organization can function. In addition, records are the by-products of managerial and administrative activities, and they mirror the over-all quality of the organization's business performance. To be meaningful, it must be accompanied by a detailed set of definitions that identify when a record is created and what

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

11

type of evidence is required to create reliable and authentic record. Every existing organization globally is a product of records as they depend on it holistically to execute their plans.

The ability of tertiary institutions to create and manage their records successfully will distinguish it from their likes on positive note. Records are information put into a temporary or permanent physical or electronic medium. It could be seen as any instance of a physical medium on which information was put for the purpose of preserving it and making it available for future reference (oxford online English Dictionary. 2022).

Related Systems

Development of an Online Student Record Management System for a Higher Education Institution

The system was designed to automate the process of student record management, reduce the workload of staff, and provide students with easy access to their records. The system was developed using PHP and MySQL, and was tested using sample of students and staff from the institution. The results showed that the system was effective in managing student records and

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

12

was easy to use for both staff and students (Okafor, Anene and Nwachukwu, 2021).

**Student Registration and Records Management Services of the

Records Digitization**

Private Schools-Student Registration and Record Management o\Office (SRRMO) records are the school's memory, and such are vital asset for on-going operations, providing valuable evidence of activities and transactions carried out by the organization. It documents the actions, transactions and serves as a reliable and accurate evidence of the decisions made by the authority. Being a private organization, SRRMO receives a substantial evaluation from various accrediting bodies. Given this, fulfillment of the principles of accountability and transparency is particularly important (Purcia & Merida, 2021).

Table 1. Matrix of Studies Related to Student Record Management System

CHAPTER III

METHODOLOGY

This chapter include the place of the study, the organization, the operational, technical, and economic feasibility, and the data processing used for the development of the proposed project.

Project Development

i. Software Development Process Model

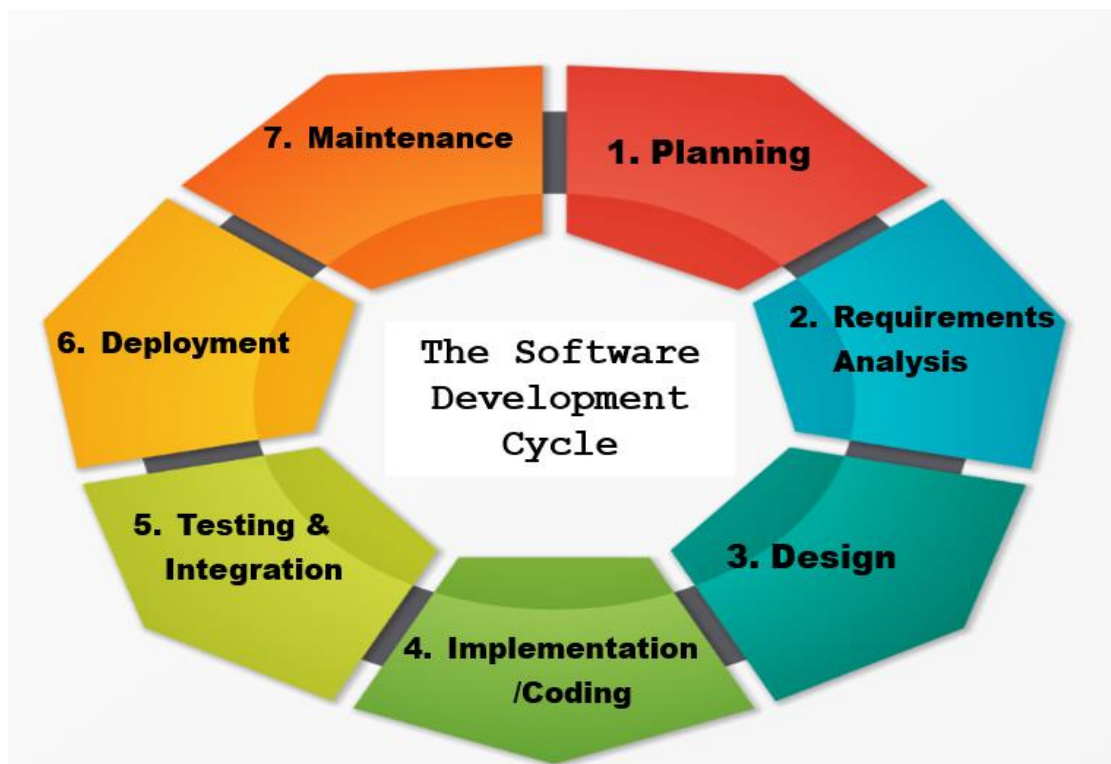

Figure 1. SDLC Agile Methodology Model

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

16

The development of the Student Record Management System (SRMS) for Madison Scholastic Academy will follow the principles of the Systems Development Life Cycle (SDLC), specifically employing the Agile model to ensure flexibility and iterative progress.

Planning

Planning is the initial and most crucial stage of the SDLC. During this phase, the project team will define the scope and objectives of the SRMS. This includes identifying the key features and functionalities required, assessing the risks, and establishing quality assurance measures. The team will gather information by visiting the school's administrative office and consulting with relevant stakeholders.

Requirements Analysis

In this phase, the researchers will collect detailed requirements through interviews and surveys with administrative staff, teachers, and other stakeholders. An approved letter from the Dean and thesis adviser will be submitted to facilitate data gathering. This stage aims to understand the specific needs and challenges related to student record management at Madison Scholastic Academy.

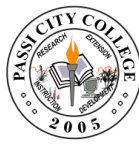

Design

The design phase involves creating a blueprint for the SRMS. The project team will work together to develop the system's architecture and interface. A prototype will be created to visualize the system and gather feedback from stakeholders. Apache NetBeans IDE 17 will be used for the development environment, and XAMPP control panel will initially serve as the database for prototype purposes.

Figure 2. Designing Window Layout

Designing Window Layout. This step is where you can create a dashboard for the system for all registry and transactions.

Coding/Implementation

During this stage, the actual development of the SRMS began. The project team used programming tools such as compilers, interpreters, and debuggers to write and implement the code according to the design specifications. Developers will follow coding guidelines and best practices to ensure the system is robust and reliable.

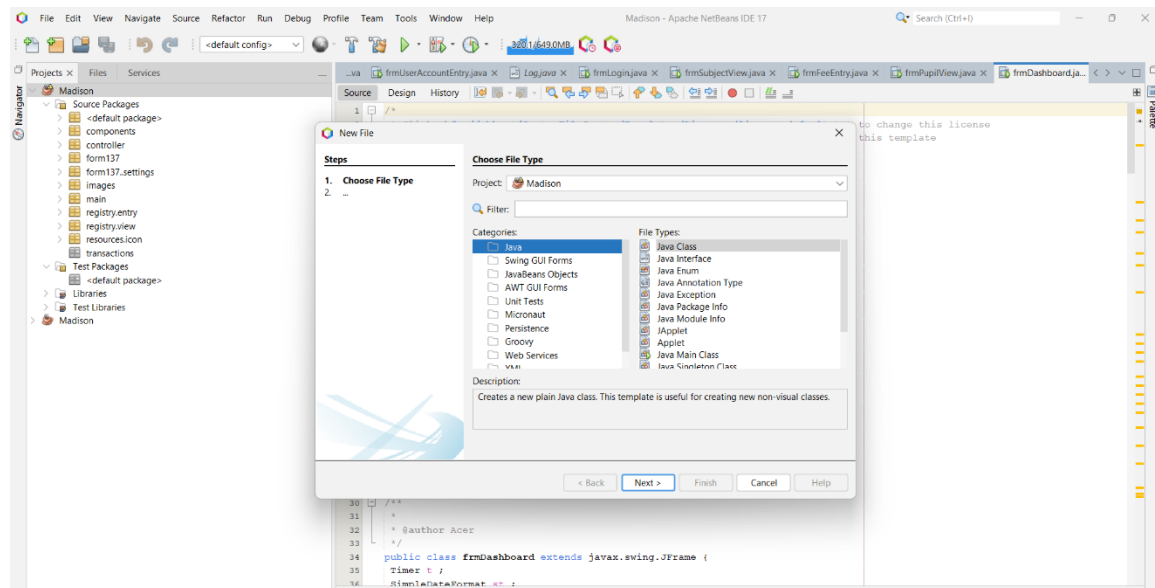

Figure 3. Creating Project

Creating Project. This is the first step for initializing a fresh, new system project intended for the development of the system.

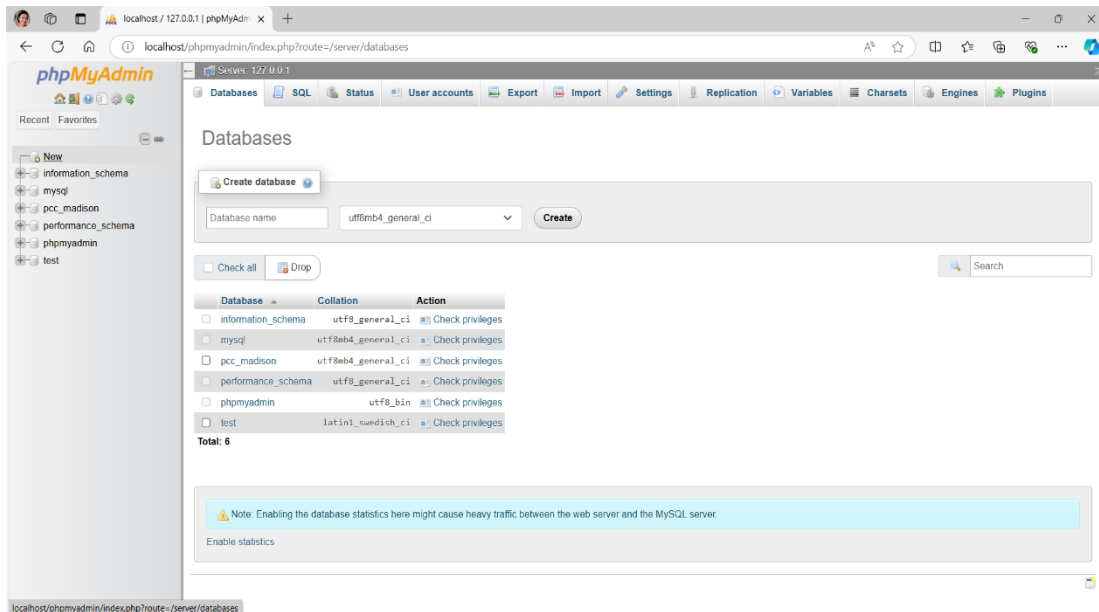

Figure 4. Creating Database

Creating Database. Creating the database is one of the priorities in creating the project, especially if the system is created to store, modify or delete records in an assigned database. Here, whatever you do to the record in the system will affect also on the database.

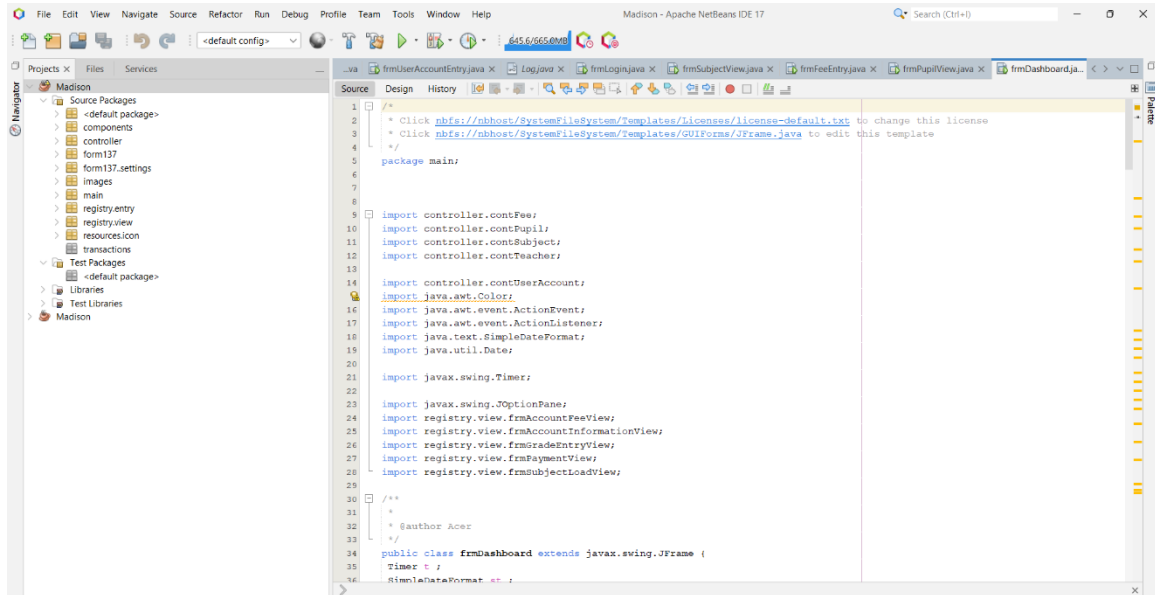

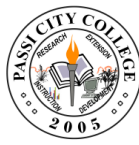

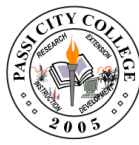

Figure 5. Coding and Development

Coding and Development. After everything was prepared in each Windows, all the researchers did was to code the program in accordance to command you entered and the result it will give. For example, you created a "Update" button in a window, so the codes or commands you need to enter for the corresponding button should also have an "Update" function.

Testing

Testing is a critical phase where the system have undergone rigorous testing to identify and fix any bugs or issues. The project team will perform various tests, including unit testing, integration testing, system testing, and user

acceptance testing, to ensure the SRMS functions correctly and meets the defined requirements.

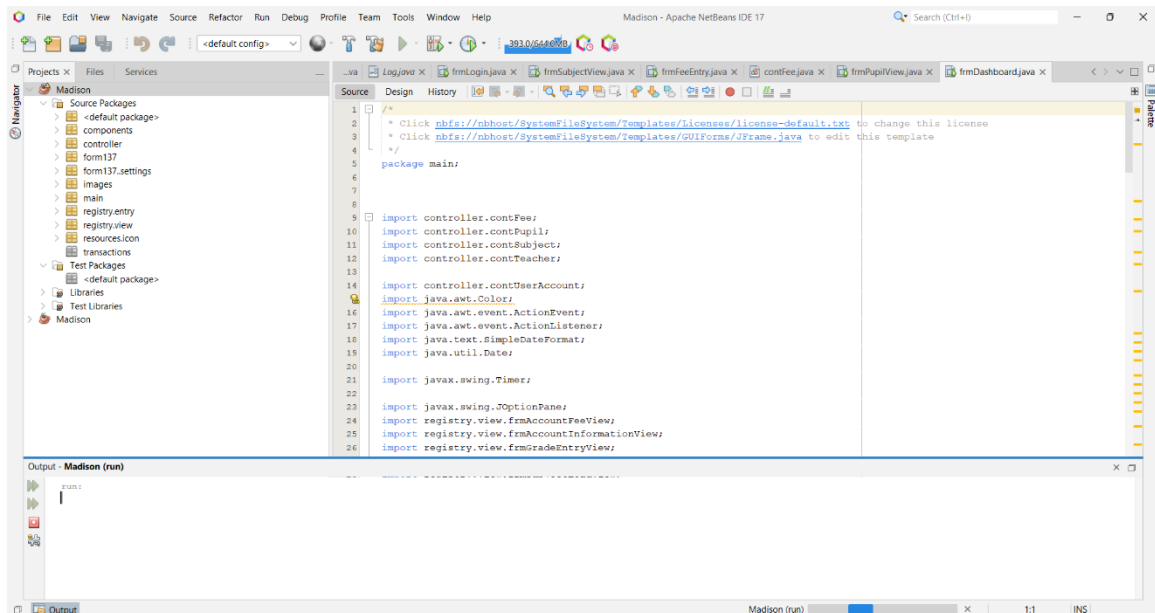

Figure 6. Compiling and Debugging

Compiling and debugging. After entering the code for each object in the Window, the compilation and running of the developed program starts. This needs to be done to continue the running of the program without error whether in code, or some invalid exceptions. If some errors have been determined after the program has been run (syntax error) or during the ran (runtime error), the debugging starts where you can fix or debug the errors that have been in a developed program.

Final Run. This is where we finalized the fully developed program/system by checking for more errors or if it is running correctly. You can either double-check the code, time and or

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

22

some resources to know the recommended specification or compatibility of the system to a computer.

Compatibility Test. This is where you need to test the fully developed system on different computer with different specifications needed for a system, like the RAM size, resolution, storage, etc.

User Testing and Implementation. After all the compatibility tests and final checking of the system, researchers and developers tested it in real-time to the intended users depending on what the purpose of the system is. After the user testing, there are some recommendations and/or feedback that the users want to add and remove everything about payments. After some recommendations, the fully developed system will be checked again if it's already ready for implementation.

Deployment

Once the SRMS has been thoroughly tested and is deemed ready for use, it will be implemented at Madison Scholastic Academy. The initial implementation phase includes setting up the system on the school's servers, configuring necessary settings, and ensuring all components are operational.

Maintenance

After deployment, the SRMS will enter the maintenance phase, where it will be monitored and updated regularly to address any issues that arise and to incorporate new features or improvements based on user feedback. Continuous support and training will be provided to ensure the system remains effective and user-friendly.

Project Requirements Specifications

i. Operational Feasibility

Functional Decomposition Diagram

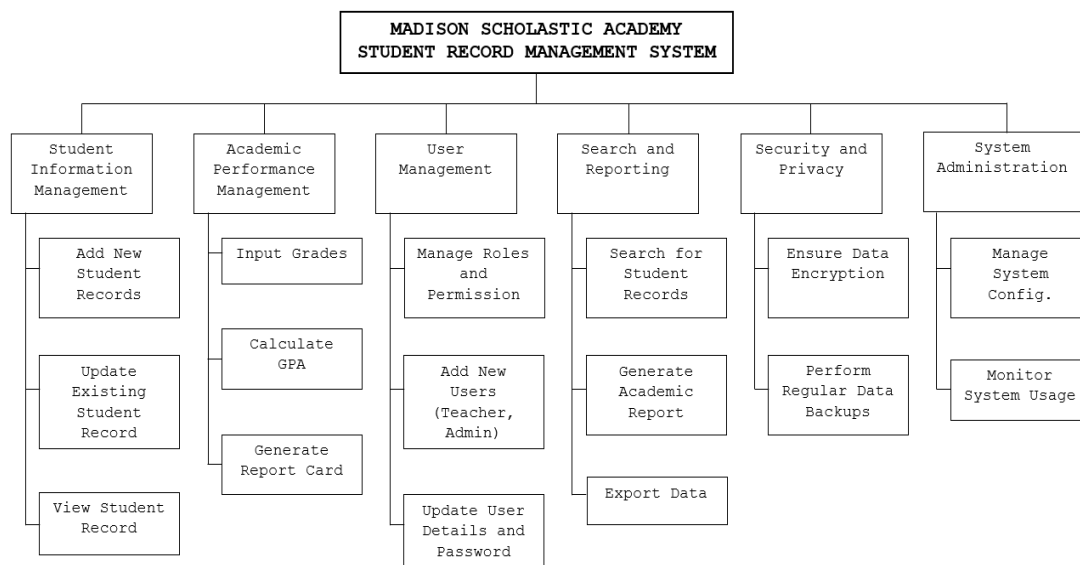

Figure 7. MSA Student Record Management System
Functional Decomposition Diagram

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

24

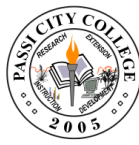

The Functional Decomposition Diagram of the Madison Scholastic Academy Student Record Management System outlines the structured breakdown of the system into distinct, interrelated components, each serving a specific purpose to streamline the academy's record management processes.

At the topmost level is the **Madison Scholastic Academy Student Record Management System**, which serves as the overarching framework. This is decomposed into key functional areas to ensure clarity, modularity, and efficiency in design and implementation.

The first functional area, **Student Information Management**, acts as the backbone of the system, managing all student records. It facilitates tasks such as adding new students, updating existing records, and viewing detailed student records, ensuring a centralized and accessible repository for student data.

The **Academic Performance Management** module focuses on academic record-keeping. Teachers can input grades, calculate GPAs, and generate report card, offering a comprehensive view of student performance.

User Management ensures the system's security and usability by defining and managing roles and permissions. It allows administrators to add new users, update user details, and

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

25

control access based on roles, maintaining the integrity and privacy of sensitive data.

Search and Reporting functionalities provide powerful tools for retrieving and analyzing data. Users can search for specific student records and generate academic reports and the ability to export data.

The **Security and Privacy** module protects the system from unauthorized access and data breaches. Role-based access control, encryption, and regular data backups safeguard the integrity of student records.

Lastly, **System Administration** provides the tools to configure, monitor, and maintain the system. Administrators can manage settings, monitor usage logs, and perform data integrity checks to ensure the system operates smoothly and efficiently.

This decomposition into functional components highlights the Madison Scholastic Academy Student Record Management System's robust design, focusing on modularity, security, and user-centricity. By addressing each functional area comprehensively, the system ensures streamlined workflows, enhanced communication, and reliable record management for Madison Scholastic Academy.

Use Case Diagram

A Use Case Diagram provides a visual depiction of how various stakeholders interact with a Student Record Management System (SRMS) in the context of the system. It draws a line across the interactions throughout time, encapsulating the key features that are important to administrators and users alike.

The SRMS's Use Case Diagram shows different functions and access levels. Admins have higher privileges that let them do important tasks in the system. They can keep an eye on students' personal info by adding, changing, and removing records when needed. Admins also take care of student final grades to make report cards and figure out how students rank in each section.

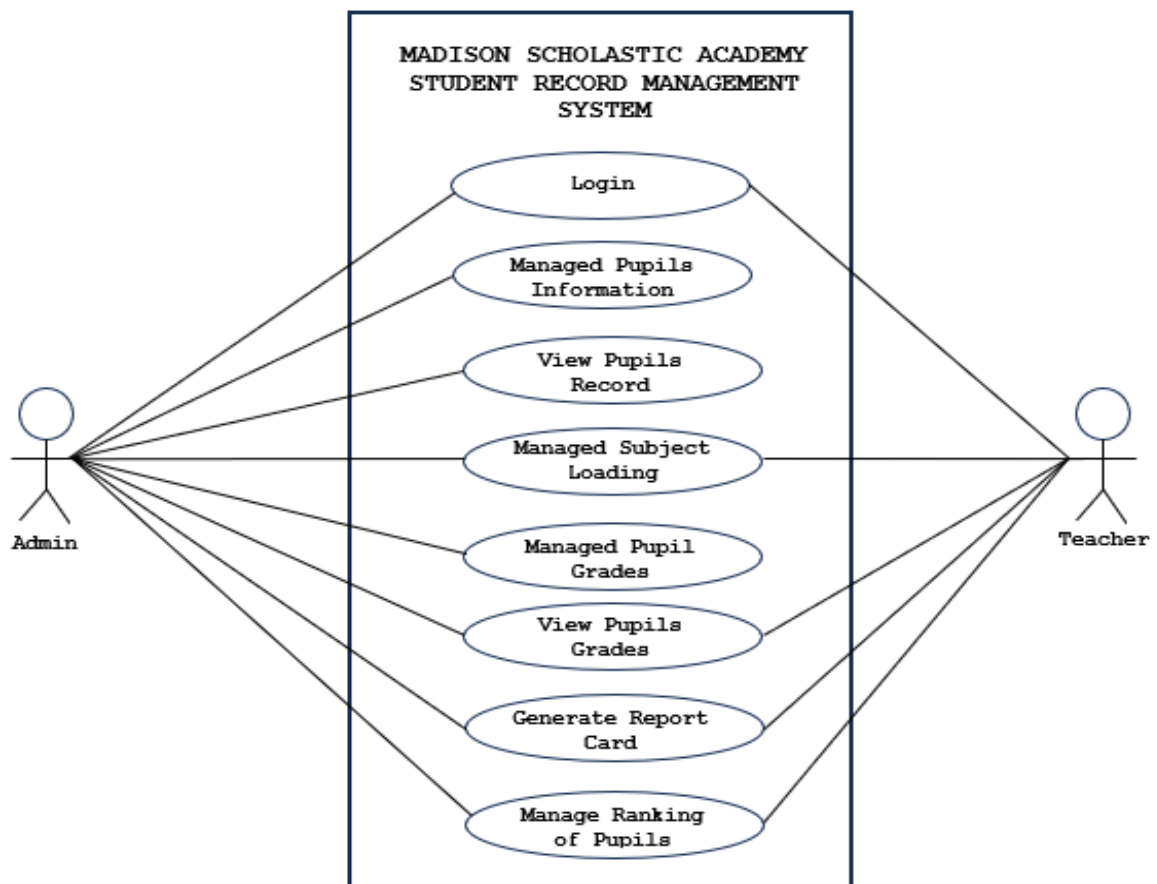

Figure 8. MSA Student Record Management System
Use Case Diagram

ii. Technical Feasibility

Technical feasibility is technical requirements such as software facility, hardware facilities, procedure, and input. It is also one of the important phases of the system development activities.

The proposed system offers a greater level of user-friendliness combined with greater processing speed. Therefore, the cost of the maintenance can be reduced. Since,

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

28

processing speed is very high and reduced in the maintenance point of view, the management is convinced that the project is operationally feasible.

Software Specification

The proposed Student Record Management System is user friendly and provide faster transactions. Management is convinced that this project is feasible.

Database Engine: XAMPP control panel

Programming language: Java

IDE: Apache NetBeans IDE 17

Hardware Specification

Processor Speed: Minimum of 2.3 GHz or higher

Memory: Minimum of 8 GB or higher

Hard Disk Space: Minimum of 256 GB or higher

OS: Windows 10

iii. Schedule Feasibility

Gantt Chart

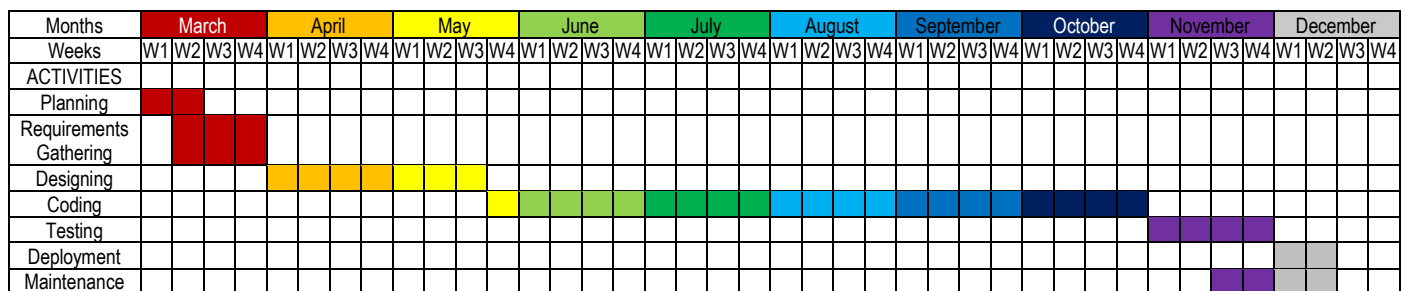

Table 2. Madison Scholastic Academy Student Record Management System Gantt Chart

iv. Economic Feasibility

Cost and Benefit Analysis

Economic feasibility is the process of identifying the financial cost and benefits associated with a development project. The systems budget which is the Student Record Management System is present below:

Development Cost of the Project

Project Task	Cost
System Development	₱25,000.00
Miscellaneous	₱3,000.00
Total	₱28,000.00

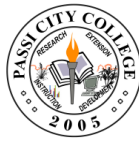

Table 3. Development Cost of the Project

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

30

Table shows the budgeted amount of the Student Record Management System Development cost and annual operating cost. The development cost is ₱28,000.00 including all cost incurred during the development of the proposed project. The annual operating cost also known as the maintenance cost refers to cost that will be spent by the developer needs to check the system for maintenance every 4 months. The system's total budget covers the development and annual operating cost. If the school would like to invest in the proposed project, it is needed that a cost benefit analysis should be presented.

Project Design

i. Requirements Modeling

IPO Chart

The MSA student record is the input used in developing the system. The researcher used the System Development Life Cycle (SDLC) method in developing the system. The application was evaluated in terms of its usability. The system developed, the Student Record Management System and the evaluation results will be the outputs.

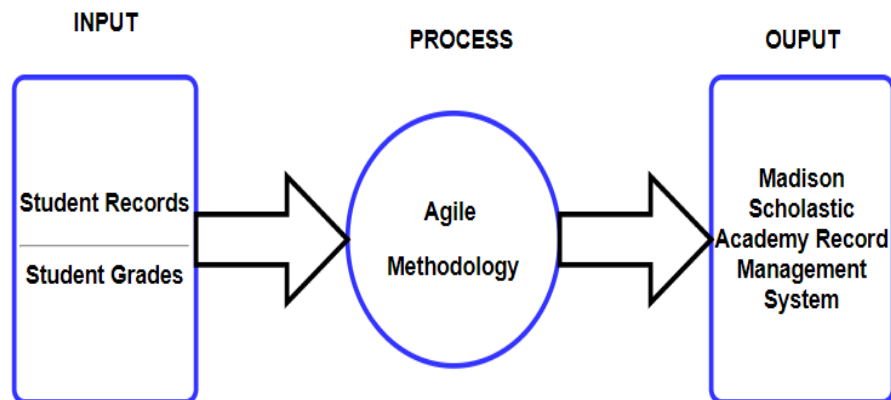

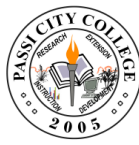

Figure 9. Input-Process-Output

Context Diagram

The MSA Student Record Management System serves two main users: the Admin and the Teacher. The admin is responsible for managing the system and ensuring that student information is current. Meanwhile, the Teacher oversees entering grades, generating report cards, and reviewing student rankings. This system integrates the roles of both the admin and the teacher, consolidating all information in a single location. This arrangement facilitates effective management of student records and allows for monitoring of student performance in school.

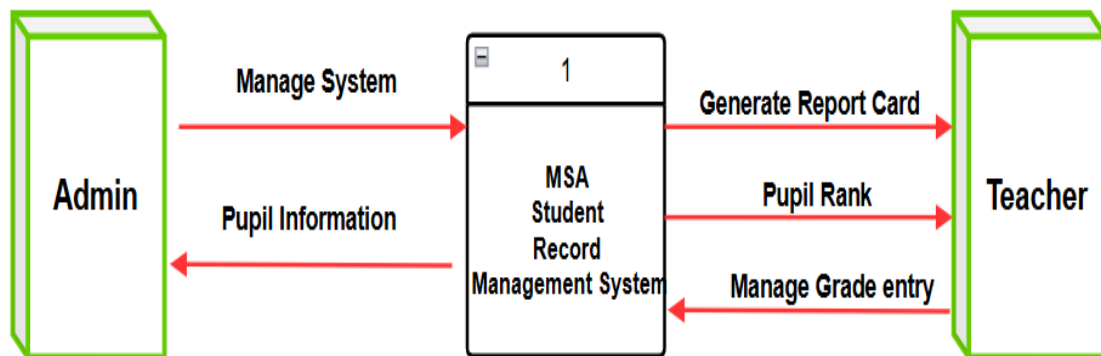

Figure 10. Context Diagram

Data Flow Diagram

A MSA Student Management System involves three main components: the Admin, the Teacher, and the Student Database. The Admin is responsible for inputting and managing student information, which is stored in the Student Database, and generating reports. The Teacher oversees student grades and utilizes the database to calculate these grades and ranks. The system enables the Teacher to generate report cards based on the grades and ranks recorded in the database. This structure promotes efficient communication and centralized management of student academic information.

GradeLevel	int(11)	YES		NULL	The grade level for which the grade is recorded.
Q1	int(11)	YES		NULL	The grade for the first quarter.
Q2	int(11)	YES		NULL	The grade for the second quarter.
Q3	int(11)	YES		NULL	The grade for the third quarter.
Q4	int(11)	YES		NULL	The grade for the fourth quarter.
Final	decimal(4,2)	YES		NULL	The final grade for the subject.
Remarks	varchar(15)	YES		NULL	Remarks related to the grade.
Grade	varchar(2)	YES		NULL	The overall grade for the subject.
Section	varchar(15)	YES		NULL	The section to which the pupil belongs.

Table 4. Grades

Table: `tb\_pupils`

Attribute	Data Type	Nullable	Key	Default Value	Description
PupilID	int(11)	NO	PRIMARY KEY	AUTO_INCREMENT	The unique identifier for each pupil.
LRN	varchar(15)	YES		NULL	The Learner Reference Number of the pupil.
FirstName	varchar(50)	YES		NULL	The first name of the pupil.
LastName	varchar(50)	YES		NULL	The last name of the pupil.
MiddleName	varchar(50)	YES		NULL	The middle name of the pupil.
BirthDate	date	NO		NULL	The birthdate of the pupil.
Gender	varchar(15)	YES		NULL	The gender of the pupil.
Street	varchar(45)	YES		NULL	The street address of the pupil.
Barangay	varchar(50)	YES		NULL	The barangay of the pupil.
Municipality	varchar(50)	YES		NULL	The municipality of the pupil.
FathersName	varchar(100)	YES		NULL	The name of the pupil's father.
MothersName	varchar(100)	YES		NULL	The name of the pupil's mother.
ContactNumber	varchar(15)	YES		NULL	The contact number of the pupil.

Table 5. Pupils

Table: `tb\_subjects`

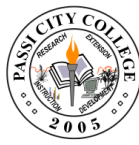

Attribute	Data Type	Nullable	Key	Default Value	Description
SubjectID	int(11)	NO	PRIMARY KEY	AUTO_INCREMENT	The unique identifier for each subject.
SubjectCode	varchar(10)	NO		NULL	The code assigned to the subject.
SubjectName	varchar(100)	NO		NULL	The name of the subject.
Grade1	tinyint(1)	YES		NULL	Indicates if the subject is applicable to Grade 1.
Grade2	tinyint(1)	YES		NULL	Indicates if the subject is applicable to Grade 2.
Grade3	tinyint(1)	YES		NULL	Indicates if the subject is applicable to Grade 3.
Grade4	tinyint(1)	YES		NULL	Indicates if the subject is applicable to Grade 4.
Grade5	tinyint(1)	YES		NULL	Indicates if the subject is applicable to Grade 5.
Grade6	tinyint(1)	YES		NULL	Indicates if the subject is applicable to Grade 6.

Table 6. Subjects

Table: `tb\_teachers`

Attribute	Data Type	Nullable	Key	Default Value	Description
TeacherID	int(11)	NO	PRIMARY KEY	AUTO_INCREMENT	The unique identifier for each teacher.
TeacherCode	varchar(45)	YES		NULL	The code assigned to the teacher.
FirstName	varchar(50)	NO		NULL	The first name of the teacher.
LastName	varchar(50)	NO		NULL	The last name of the teacher.
MiddleName	varchar(50)	NO		NULL	The middle name of the teacher.
Gender	varchar(45)	YES		NULL	The gender of the teacher.
Birthdate	date	YES		NULL	The birthdate of the teacher.
ContactNumber	varchar(50)	YES		NULL	The contact number of the teacher.
Address	varchar(45)	YES		NULL	The address of the teacher.

Table 7. Teachers

The screenshot shows a web application interface for 'Pupil Printouts'. On the left is a sidebar with 'DASHBOARD' and 'REGISTRY' sections. The 'REGISTRY' section includes links for 'User Accounts', 'Pupils', 'Teachers', and 'Subjects'. The 'TRANSACTIONS' section includes 'Subject Loading', 'Grade Info Entry', 'Ranking', and 'Pupil Printouts'. The main area displays a 'Pupil Printouts' window with filter options for GradeLevel, Section, Gender, and Academic Year, all set to 'ALL'. Below the filters is a table of student records.

Figure 24. Printouts

System Architecture

Network Model

The client-server student record management system at Madison Scholastic Academy is designed for offline use, enabling teachers, and administrators to access and manage student records through a central server. In this setup, teachers input final grades on their devices (clients), which are then stored on the main server. The server processes this data, allowing administrators to create report cards and determine student rankings for each section. Since the system operates offline, it functions entirely within the school's

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

47

internal network, eliminating the need for internet access. This arrangement provides a single, reliable source of information for all users, but it also depends on the server's stability for uninterrupted access to student records and reports.

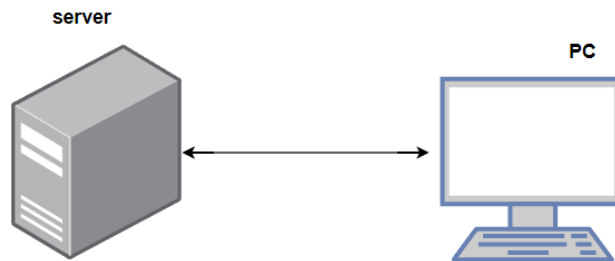

Figure 25. Network Model

Network Topology

Madison Scholastic Academy uses a computer with a built-in server and a connected printer for its student record management. This setup handles final grades without internet access. The computer stores all student information and works as both server and workstation. Admin type in grades, generate report cards, and compute student standings in each class on this thing. They print out report cards and standings on that printer. It is on a local network because the system is offline so it does not leave the school and the information

is not compromised, and the system does not have to be on the internet to run.

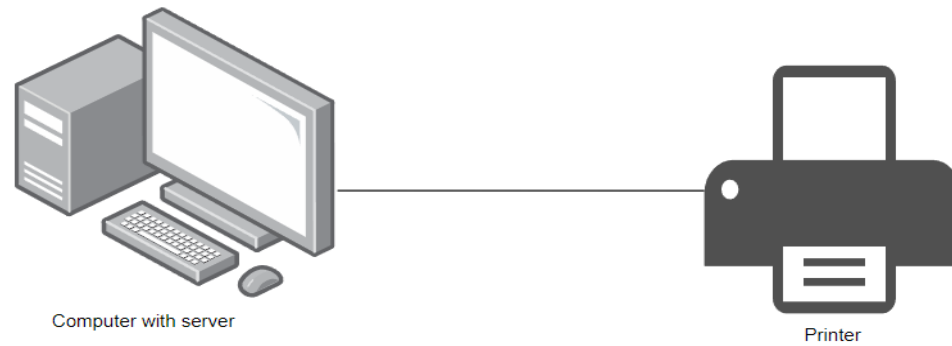

Figure 26. Network Topology

Security

To ensure the security of the sensitive data and the system functionality of Student Record Management System here are some key security measures:

System Security

- To protect SRMS access, use user authentication and strict password requirements.
- Update and patch SRMS software frequently to improve security and fix vulnerabilities.
- Make use of encryption methods to safeguard private information kept in the SRMS database.

Database Security

Role-based access control and strong user authentication ensure that only authorized personnel have access to the database, preventing illegal access.

Data Encryption: By adding an extra layer of protection, encrypted sensitive data, both in transit and at rest, protects student records from illegal access or interception.

Backup and Recovery: Ensuring that data can be restored in the event of data loss or corruption and testing recovery methods on a regular basis helps to minimize the effect of security breaches or system failures.

Programming Environment

The front end we used in the system is Apache NetBeans IDE 17. All the controls, user interface and other visual elements were designed using Jasper report Studio and were code using Java. The system database engine we used is MySQL Server 2014. This serves like filling cabinet where all data are store.

Testing. Unit testing was conducted in this study wherein each of the system modules was examined to ensure proper operation. Madison Scholastic Academy Student Record Management System has the following operations: Record

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

50

Management, Basic file operation, Generate Report Card, and Ranking. Record Management refers to the record of the pupils which saved and organized based on their sections, grade level and school year. Records of 100 pupils in each section were encoded into the system and the system were successfully organizing and sorting all the records as per criteria defined. Basic file operation refers to updating, saving, searching, and sorting records of stored in the database. From the records that were encoded in the database using the system, the system was able to return all expected values when searching records and successfully updating desired records of the pupils. Generate Report Card refer to s preparing a document that summarizes a student's academic performance over a specific period, such as a semester or school year. It includes important details like the student's name, ID number, class, section, subjects, and grades. The report card also shows overall performance, such as total marks, percentage, or GPA, and sometimes the student's rank in the class. Additionally, it may feature teacher comments, school details, and spaces for signatures, serving as an official record of achievements and areas for improvement. Ranking refers to the process of ordering or placing students in a

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

51

specific position based on their academic performance, typically within a class or section

Load Testing. By doing loading testing we ensure that the system units are conditioned and the program is properly working and optimized to meet the system expectations. The system should run only using any platform of Windows Operating System. The loading is about 3 to 5 seconds when registering and loading of pupils simultaneously by sections.

Data Analysis Procedure

The data gathered was subjected to appropriate descriptive statistical tools. In evaluating the usability of the application, the gathered points were tabulated and analyzed using the System Usability Score.

The Formula in computing the SUS is: $SUS = (X + Y) \times 2.5$

Where:

X= the points for odd- numbered questions minus 5

Y= 25 points for even- numbered questions minus 5

Y= 25 the points for even- numbered questions. In interpreting the result of the data gathered in evaluating the system's usability, the researcher solved the average score and interpreted the system's usability. Evaluation instruments the researchers made use of Standardized

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

52

Questionnaire checklist of John Brooke 1986 in determining the usability of the developed application. The evaluation instrument is shown in table 8.

Research Instrument

Madison Scholastic Academy Student Record Management System

Name of the Respondent (Optional): _____

Address: _____ Age: _____

Direction: Check the appropriate scale that corresponds to your honest assessment.

Numerical Rating	Descriptive Rating
5	Strongly Agree
4	Agree
3	Neutral
2	Disagree
1	Strongly Disagree

Item #	Criteria	1	2	3	4	5
1.	I think I would like to use this system frequently.					
2.	I found this system software unnecessarily complex.					
3.	I thought this system was easy to use.					
4.	I think I would need assistance to be able to use this system.					
5.	I found the various function in this system were well integrated.					
6.	I thought there was too much inconsistencies in this system.					
7.	I would imagine that most people would learn to use this system very quickly.					
8.	I found this system cumbersome/akward to use.					
9.	I felt very confident using this software.					
10.	I needed to learn a lot of things before I could get going with this software.					

Table 8. Research Instrument

CHAPTER IV

PRESENTATION, ANALYSIS, AND INTERPRETATION OF DATA

This chapter describes the study's findings and results of the system usability evaluation. This study aimed to develop a Madison Scholastic Academy Student Record Management System and determine its acceptability in terms of usability as evaluated by 15 Teachers of Madison Scholastic Academy.

Evaluation on the Usability of the MSA Student Record Management System

The MSA Student Record Management System was evaluated by fifteen (15) teachers of Madison Scholastic Academy who were chosen purposively. The results show that the system got a grand system usability Mean of 96 which means it is graded A+, within the 96-100 Percentile Range, described 'Best Imaginable' 'Acceptable' and 'Promoter' which means that the respondent will promote the evaluated system.

Table 9. Result of System Usability Evaluation

Indicator	Mean	Graded	Adjective	Acceptability	NPS
Usability	96	A+	Best Imaginable	Acceptable	Promoter

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

54

The overall usability of the MSA Student Record has received highest score, with a mean of 96 out of 100. This would correspond to an A+ grade, which is the highest grade possible, and the adjective "Best Imaginable" would suggest that the system is user-friendly and easy to use.

In terms of acceptability, the system received an acceptable rating; the system is generally satisfactory to users, although there may be some areas of improvement.

Finally, the NPS score of "promoter" is a very positive sign, indicating that users are highly likely to recommend the system to others. This suggests a level of satisfaction with the system and bodied well for its continued use and adoption.

Overall, these results suggest that the Student Record Management System is performing well from a usability perspective and should be seen as a success by all those involved in its development and implementation.

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

CHAPTER V

SUMMARY, FINDING, CONCLUSIONS, AND RECOMMENDATIONS

Summary

This MSA Student Record Management System is descriptive-developmental research aimed at develops a MSA Student Record Management System for Madison Scholastic Academy and determine its acceptability in terms of usability. Apache NetBeans IDE 17 and Xampp was used to develop the system, and the SDLC- Agile method was also implemented that guide the developer. The researchers used purposive sampling in choosing fifteen (15), one (1) admin and fourteen (14) teachers of Madison. After the application was developed, it was tested and evaluated for usability. It was made by distributing the questionnaires checklist of John Brooke 1986 to the respondent. The data were analyzed using the system usability score. The study was conducted at the Madison Scholastic Academy of Commonwealth Drive, Pob. Ilawod, Passi City, Iloilo.

Findings

The findings of the study revealed that:

1. The systems on MSA Student Record Management System were developed by following the SDLC process.
2. The System got a SUS score of 96 which means it was graded A+, within the 96-100 percentile Range, describe as 'Best Imaginable' 'Acceptable' as to acceptability and got Net Promoter Score described as promoter.

Conclusion

Based on the results and findings of the study, the MSA Student Record Management System has graded A+ in terms of usability within 96-100 percentile Range. Described as 'Best Imaginable' 'Acceptable' as to acceptability, at ad got Net Promoter scored describe as a promoter, with that respondents will promote the system since most of them believed that they would like to use the system frequently, and most of them would learn to use the system quickly.

Recommendations

1. This system ensures that records are well secured in a centralized database wherein an authorized personnel member can easily check the records of the pupils.
2. The users of the developed system will undergo demonstrations for effective use of the system.

APPENDICES

Appendix A

User's Guide

Welcome to the development system entitled "Madison Scholastic Academy Student Record Management System." This was developed to provide a quicker and more systematic way to input the student details and to compute quarterly grades and report cards. It also provides reliable and secures the private records of pupils. To get in touch with the system, please follow the following steps:

1. In the Xampp Control Panel Start the Apache and Mysql

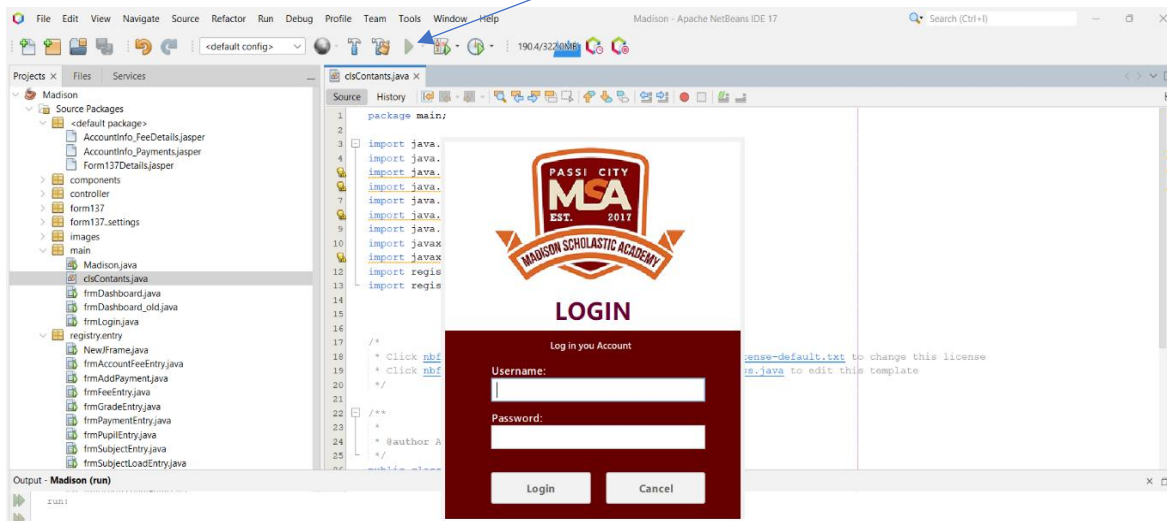

4. Then open Apache
NETbeans wait for 2-3
seconds to loading it.

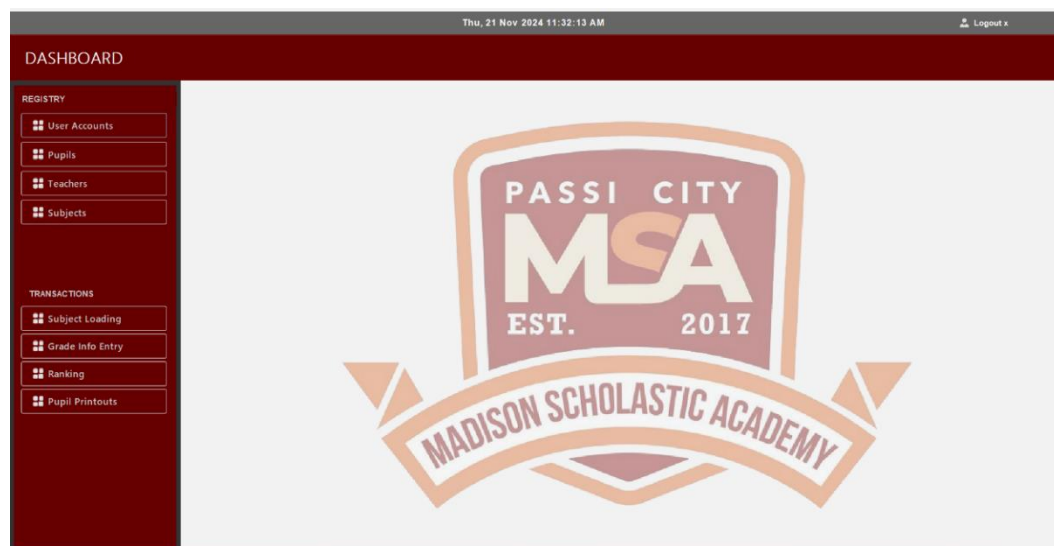

The first step is entering the user account and password then log in.

You just click this button to appear login form.

After the log in you will see the home screen called, dashboard.

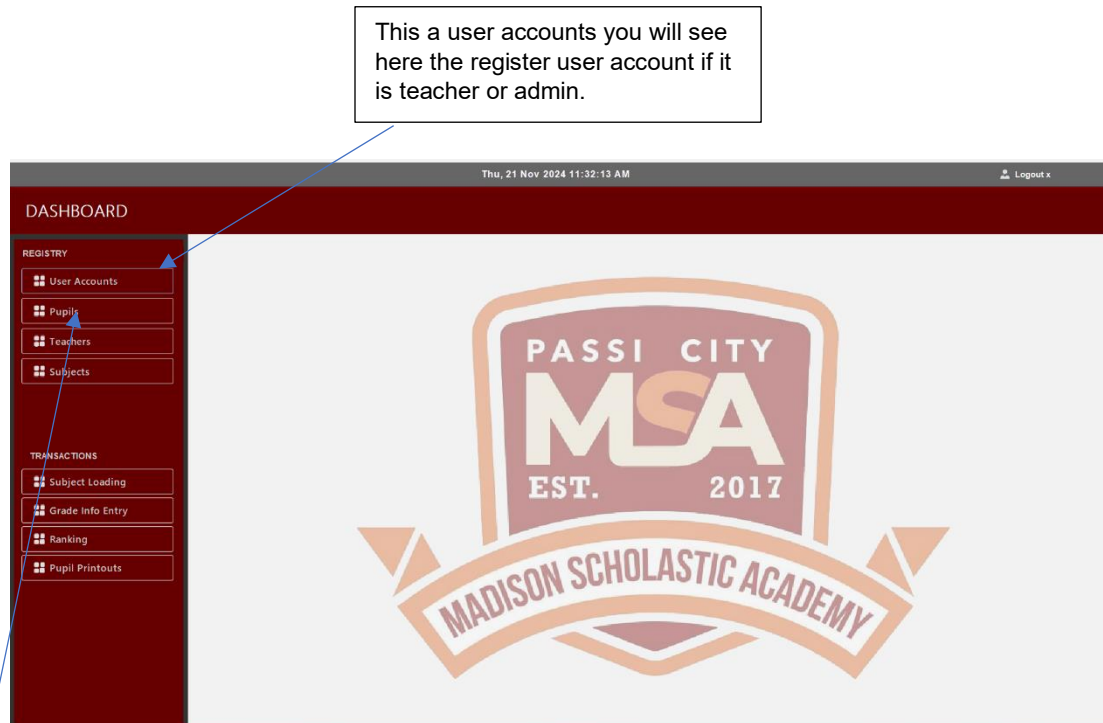

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

62

The dashboard gives you easy access to different sections, like Pupil Information, Teachers, and Subjects.

You can switch between "Registry" and "Transactions" options on the left panel for specific tasks.

If you want to register pupils. Just click this pupil's button.

Once you click pupils' button. This will be appeared to your dashboard.

Search Field: Enter a pupil's name or LRN (Learner Reference Number) in the search bar to locate their record quickly.

Use the **Refresh** button to update the displayed records after making changes.

Filter Options

Use the filters to search pupils based on Grade Level, Section, Gender, or Academic Year.

The screenshot shows the 'Pupil Information' dashboard. On the left is a sidebar with 'REGISTRY' (User Accounts, Pupils, Teachers, Subjects) and 'TRANSACTIONS' (Subject Loading, Grade Info Entry, Ranking, Pupil Printouts). The main area has a 'Filter Option' section with dropdowns for GradeLevel, Section, Gender, and Academic Year. Below this is a 'Record Operation' section with 'Add', 'Update', and 'Remove' buttons. A search bar at the top right contains 'Search PupilName' and a 'Refresh' button. A table lists pupils with columns: LRN, PupilName, Age, BirthDate, Gender, ContactNum..., GradeLevel, Section, and SY.

LRN	PupilName	Age	BirthDate	Gender	ContactNum...	GradeLevel	Section	SY
234234234234	Lopez, Pedro Aquino	7	2017-01-30	Male	09101112131	Grade 1	Acacia	2023-2024
000000000008	Mendoza, Jose Pascual	7	2017-01-25	Male	09890123456	Grade 1	Acacia	2023-2024

000000000022	Santos, Maria Garcia	10	2014-05-15	Female	09223456789	Grade 4	Lithium	2023-2024
000000000023	Torres, Carlos Dela Cruz	11	2013-10-22	Male	09334567890	Grade 4	Lithium	2023-2024

This is an add button. Just click this if you want to register a pupil. This is what you will see.

Add: Click this to open the *Pupil Entry* window for registering a new pupil.

Update: Select an existing pupil record and click **Update** to

The screenshot shows the 'Pupil Entry' form. It has fields for: LRN, Lastname, Firstname, Middle Name, Sex, BirthDate, Street, Barangay, Municipality/City, Fathers Name, Mothers Name, Contact Number, Grade Level, Section, and School Year. There are 'Save' and 'Cancel' buttons at the bottom. The background shows the same dashboard as the previous screenshot.

SCHOOL OF INFORMATION AND COMMUNICATION TECHNOLOGY

64

The *Pupil Entry* form allows you to input or update the following details:

- LRN, Last Name, First Name, Middle Name, Sex, Birthdate, Address (Street, Barangay, Municipality/City), Parent Information, Contact Number, Grade Level, Section, and School Year.
- Fill in the required fields and click **Save** to store the data or **cancel** to discard changes.

On the left-hand panel under the *Registry* section, click **Teachers** to access the Teacher Information module.

Subjects information

- Subject Code: A unique identifier assigned to each subject.
- Subject Name: The title of the subject (for example, English, Mathematics).
- Grade Levels (Primary and Secondary): A checkbox system shows which grade levels the subject applies to.

Adding a New Subject:

- Click the Add button to access the form for entering a new subject.
- Fill in the details such as Subject Code, Subject Name, and select the relevant grade levels by checking the appropriate boxes.
- Click Save to record the new subject.

Updating an Existing Subject:

- Select a subject from the list by clicking on its row.
- Click the **Update** button to modify the subject details, including its grade level applicability.
- Make the changes and click **Save** to confirm.

Removing a Subject:

- Select the subject from the list you wish to remove.
- Click the **Remove** button to delete the subject from the system. Confirm the action if prompted.

NOTED: ALWAYS PUT MAPEH SUBJECT AT THE BOTTOM

The screenshot shows a web application interface with a dark red header bar displaying the date and time: "Tue, 17 Sep 2024 22:44:48 PM". In the background, there is a "Subject Loading" window with a "Filter Grade Level" dropdown and a list of LRN numbers. Overlaid on this is a "Pupil Subject Loading" window. This window contains several input fields: "LRN" (with the value "000000000001"), "School Year" (with the value "2024-2025"), "Lastname" (with the value "Reyes"), "Firstname" (with the value "Anna"), "Middle Name" (with the value "Lopez"), "Sex" (with the value "Female"), and "Grade Level" (with the value "Primary"). Below these fields is a "Load Subjects" button. At the bottom of the "Pupil Subject Loading" window is a table with two columns: "SubjectCode" and "Subject". The table contains the following rows:

SubjectCode	Subject
FIL	Filipino
ENG	English
MAT	Mathematics
SCI	Science
MUS	Music
ART	Arts
PE	PE

A "Close" button is located at the bottom right of the "Pupil Subject Loading" window.

In the transactions , these is subject loading

- Select the pupil's record to load their details into the form. Or double tap the name of the pupil.
- After selecting a pupil, click the **Load Subjects** button.
- The list of subjects applicable to the pupil's grade level will be displayed, including:
 - *Subject Code*
 - *Subject Name*

□ Once subject loading is complete, click the **Close** button to return to the previous screen or main dashboard.

Click **Grade Info Entry** to access this module.

The screenshot shows a web application interface with a dark red header and sidebar. The main content area displays a 'Pupil Grade Entry' form. The form has a search bar at the top with 'Search Pupil Name' and a 'Refresh' button. Below the search bar is a table with columns: LRN, PupilName, Age, Gender, GradeLevel, and Section. The table contains 25 rows of data. The first row is highlighted in blue. Below the table are two buttons: 'Select Pupil' and 'Print Report Card'.

The **Pupil Printouts** section allows users to generate reports for individual pupils based on different filters such as **Grade Level**, **Section**, **Gender**, and **Academic Year**. To access the module, click on **Pupil Printouts** under the *Transactions* tab on the left side of the dashboard.

Once in the Pupil Printouts window, use the filter options to customize your search. You can select a specific **Grade Level**, **Section**, or **Gender**, and filter by **Academic Year** to narrow down the results. The system will display a list of pupils matching the selected criteria, showing their **LRN** (Learner Reference Number), **Pupil Name**, **Age**, **Grade Level**,

April 12, 2024

CHRIS MAE M. PALMARES
School Administrator
Madison Scholastic Academy
City of Passi, Iloilo

Ma'am:

Greetings of peace!

Capstone is an integral part of academic Institutions, and it plays a vital role in advancing knowledge and driving innovation.

We, the Bachelor of Science in Information Technology (BSIT) students wish to conduct our Capstone Project entitled "Student Record Management System." This study aims to develop a Student Record Management System for Madison Scholastic Academy – Commonwealth Drive, Pob. Ilawod, Passi City, Iloilo. The main goal of this system is to gather, organize, store, and manage student information inside educational institutions rapidly and accurately.

In this connection, we would like to ask permission from your good office to allow us to conduct the study this second semester of academic year 2023-2024.

Furthermore, your approval is sought to make this plan a reality. More than your authorization is a manifestation of your strong support in the college.

Thank you for your unwavering support to continuously empower us, the students.

Truly yours,

JOYL D. REBANA
Leader, Capstone Project

Noted:

Letter to Gathered Data

  **PASSI CITY COLLEGE**
City of Passi, Iloilo 

May 20, 2024

CHRIS MAE M. PALMARES
School Administrator
Madison Scholastic Academy
City of Passi, Iloilo

Ma'am:

Greetings of peace!

Capstone is an integral part of academic Institutions, and it plays a vital role in advancing knowledge and driving innovation.

I hope this letter finds you well. My name is Joylyn Rebana, and I am Thunderbolt Researcher leader. Currently, I am working on a thesis project entitled "Student Record Management System" as part of my academic requirements.

The purpose of my thesis is to develop a comprehensive system for managing student records efficiently. To conduct thorough research and analysis for this project, I am reaching out to request some essential data from Madison Scholastic Academy.

I kindly ask for your assistance in providing the following information related to student records:

1. Students' Information:
 - Complete Name of Pupil: Grade 1-6
 - Level of Grade/Class (Form): [Form 1-37]
2. Account Charges:
 - For the academic year, could you kindly offer a breakdown of the current account fees?
3. Subject for Grades 1-6:
 - Could you provide me a list of the subjects that are taught at each grade level (Grades 1-6)?

The Student Record Management System will benefit immensely from the creation and improvement of this information. I really appreciate your help in supplying this data, which will be crucial to the successful completion of my thesis research.

I sincerely appreciate your help and time. Thank you.

Sincerely,

JOYLYN D. REBANA
Leader, Capstone Project
