

Lesson 1

Definition and Scope of multimedia

Multimedia is the integrated use of multiple forms of media such as text, images, audio, video, animation, and interactive elements within a single digital or physical presentation to

convey information more effectively than any single medium alone. Its scope is broad, encompassing educational tools (e-learning modules, interactive textbooks), entertainment

(movies, video games, streaming content), business and marketing (advertisements, corporate

presentations, websites), communication platforms (social media, video conferencing), and

emerging technologies like virtual reality, augmented reality, and immersive digital

experiences, all aimed at enhancing engagement, understanding, and user interaction across

diverse fields.
